

LEE ROI ANDREI D. CAYETANO

DevSecOps | Security Monitoring | Alert Triage | Log Analysis | Python/Bash Automation

Email: Leeroi.C25@Gmail.com

Phone: +63 969 237 6345

Location: Calumpang, Marikina City

PROFESSIONAL SUMMARY

DevSecOps (OS Hardening & Secure ISO Engineering) with 10+ months of hands-on security operations exposure and 4+ years of competitive and lab-based cybersecurity practice. Experienced in security monitoring, log analysis, alert triage, host hardening, vulnerability mitigation, and incident documentation across Linux and Windows environments. Brings scripting capability in Python and Bash, dashboard/reporting experience, and strong remote collaboration with distributed technical teams. Hands-on SOC simulation and SIEM fundamentals support readiness for detection-focused monitoring roles.

CORE SECURITY STRENGTHS

Security Monitoring & Alert Triage	Log Analysis & SIEM Fundamentals	Python / Bash Automation
Linux / Windows Hardening	Vulnerability Remediation Support	Incident Documentation & Escalation
Dashboards & Operational Visibility	Active Directory & Endpoint Security	Cross-Functional Remote Collaboration

TOOLS & TECHNOLOGIES

Splunk fundamentals	Wireshark	Autopsy
AIDE rkhunter	Binary Ninja	chkrootkit
UFW Fail2Ban	Active Directory	Python Bash

PROFESSIONAL EXPERIENCE

AU-1 Blockchain Consultants | Remote

Jun 2025 - Present

DevSecOps (OS Hardening & Secure ISO Engineering)

- Engineered Bash-driven secure image and post-install automation for BaryonOS Mesh, covering phased package provisioning, desktop configuration, user setup, and repeatable workstation builds.
- Built Btrfs snapshot and rollback workflows for golden-image, current-state, and renter subvolumes, improving recovery readiness and controlled boot-state transitions.
- Implemented layered Linux hardening across SSH, UFW, Fail2Ban, PAM, sudo, systemctl, AppArmor, module blacklisting, unattended upgrades, and filesystem permission baselines.
- Integrated host integrity and detection tooling including AIDE, rkhunter, and chkrootkit; reviewed alerts and tuned controls to separate false positives from real security concerns.
- Developed API-driven licensing, device registration, and boot-reporting workflows using Bash, curl, and jq to capture system identity, status, and operational metadata for remote fleet management.

South Asialink Finance Corporation

Mar 2025 - May 2025

Technical Support Engineer Intern

- Provided technical support for software, hardware, and network issues on-site and remotely, handling both operational and security-related concerns.
- Responded to Active Directory security alerts including account lockouts and suspicious access indicators, following established escalation procedures.
- Used internal ticketing workflows to track, categorize, and document incidents through resolution, supporting structured change and issue management.
- Performed log review and first-pass triage of system issues, escalating potential security events to senior staff with documented context.
- Built a customized Windows deployment ISO and assisted with secure workstation preparation, user account setup, and onboarding activities.

SECURITY MONITORING PROJECTS & HANDS-ON LABS

TryHackMe SOC Simulator / Junior Security Analyst Labs	Practiced simulated SOC workflows including alert triage, log review, IOC analysis, incident investigation, prioritization, and structured response documentation.
DNS Threat Detection & Filtering Lab	Deployed AdGuard Home to monitor DNS queries, block malicious and phishing domains, and enforce DNS-layer controls through DHCP-integrated client management.
Real-Time Security Monitoring Dashboard	Built a Node-RED and Rainmeter dashboard to visualize system metrics and service health for quicker detection of abnormal behavior.
Enterprise AD & Endpoint Security Lab	Built an Active Directory lab with Group Policy enforcement, user/account administration, endpoint setup, and security policy testing in a controlled environment.

CYBERSECURITY COMPETITIONS

Hack4Gov National Cybersecurity Challenges Top 3 and Top 5 national finalists (2022, 2023) across OSINT, digital forensics, cryptography, reverse engineering, privilege escalation, and incident-style investigative tasks.	Applied structured investigative workflows under pressure: identify anomalies, analyze artifacts, assess severity, document findings, and move from detection to evidence-backed conclusions.
