## PROFESSIONAL SUMMARY

IT Specialist | Endpoint Deployment | PowerShell Automation | Freelance DevSecOps professional specializing in custom Windows/Linux ISO development, system hardening, PowerShell deployment automation, secure licensing APIs, Laravel/SQLite-backed tools, and Cloudflare Worker-based secret handling. Skilled in building local-first offline applications using Tauri, Rust, TypeScript, and Vue.js, with CI/CD, GitHub Actions, auto-updates, and security-focused protections. Passionate about automation, cybersecurity, and solving complex hardware, software, and network problems through practical, efficient solutions.

## PROFESSIONAL EXPERIENCE

### Freelance (Fiverr / Upwork) | Remote

Jun 2022 - Present

*IT Specialist | Freelance DevSecOps, Application*

*Development & Custom ISO Development*

- Delivered freelance technical work for small business, internal tooling, and deployment automation needs, covering Windows/Linux system hardening, custom ISO development, and repeatable deployment workflows.
- Provided remote freelance technical support for PC troubleshooting, hardware diagnostics, software configuration, and owner-authorized password recovery for password-protected RAR/ZIP/PDF files.
- Built secure licensing and internal service APIs using REST, Laravel, SQLite/MySQL, and Cloudflare Workers to validate software access and protect sensitive application secrets.
- Developed local-first desktop tools with Tauri, Rust, TypeScript, and Vue.js for secure file and credential storage, including privacy protections such as screenshot and screen-recording controls.
- Automated releases with GitHub Actions, CI/CD workflows, and application auto-updates to support reliable client deployments and maintenance.
- Used Notion to organize project documentation, technical notes, task tracking, and client handoff materials for systems, applications, and deployment workflows.

### South Asialink Finance Corporation | On-site / Remote

Mar 2025 - May 2025

*Technical Support Engineer Intern*

- Provided on-site and remote technical support through AnyDesk for employee hardware, software, network, printer, Windows, Microsoft 365, and internal application issues.
- Managed support tickets, documented troubleshooting steps, and maintained device inventory records using spreadsheets/documented asset tracking.
- Resolved common employee account issues, including password resets, account lockouts, user access problems, Microsoft 365 support, and workstation login concerns.
- Prepared 30+ workstations for employee onboarding by installing required software, configuring baseline settings, assisting with domain setup, and validating device readiness.
- Proposed a Custom Windows ISO workflow for repetitive deployment tasks, reducing setup time by approximately 66.7%-83.3% while improving consistency and IT Policy Compliance.
- Used PowerShell scripting for the first-boot installation process, including driver installation, software setup, firewall configuration, and policy-aligned workstation configuration.
- Escalated complex issues to senior staff with clear notes, troubleshooting history, inventory context, and relevant technical details.

SKILLS

| Support & Operations                         | Systems & Deployment                            | Development & Automation                        | Security & Networking                   |
|----------------------------------------------|-------------------------------------------------|-------------------------------------------------|-----------------------------------------|
| IT Operations & Technical Support            | Windows/Linux Imaging & Custom ISO              | Tauri, Rust, TypeScript & Vue.js                | Endpoint Security                       |
| Application Support & Software Configuration | MECM/SCCM, MDT & NTLite                         | Java, Python, JavaScript & HTML/CSS             | IAM, MFA & Cryptography                 |
| System & Hardware Troubleshooting            | DISM, Sysprep & Autounattend.xml                | Bash & PowerShell Scripting                     | TCP/IP & File Transfer Protocols        |
| Remote Support (AnyDesk, TeamViewer)         | Rufus & VMware/VirtualBox/Hyper-V               | RESTful APIs & Laravel                          | Web Exploitation                        |
| Microsoft 365 Admin & Device Inventory       | Active Directory, Group Policy & Domain Joining | SQL/SQLite/MySQL; Automation & AI Orchestration | Binary Exploitation & Digital Forensics |

PROJECTS

|                                        |                                                                                                                                                                                                                 |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Secure Licensing API                   | Built secure REST licensing endpoints with Laravel, SQLite/MySQL, and Cloudflare Workers to validate software access and protect application secrets.                                                           |
| Custom Windows ISO Deployment Workflow | Created a Custom Windows ISO and PowerShell first-boot workflow for repeatable workstation setup, reducing setup time by approximately 66.7%-83.3%.                                                             |
| DNS & Client Configuration Lab         | Deployed AdGuard Home with DHCP integration to manage DNS resolution, client configuration, and network-level filtering across devices.                                                                         |
| MetaNode OS                            | Built a local-first AI orchestration app with chat sessions and an n8n-like workflow canvas for Ollama-first IT and coding agents, using TypeScript, React, Fastify, workers, Docker, and shared core packages. |

ADDITIONAL TECHNICAL EXPERIENCE

|                                                                                                                                                                                                         |                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Hack4Gov National Cybersecurity Challenges   Top 3 and Top 5 national placements (2022, 2023), demonstrating strong analytical thinking, troubleshooting, and technical problem-solving under pressure. | Applied structured investigation and problem-solving across networking, OSINT, digital forensics, reverse engineering, and system analysis tasks. |
